

Coffee Shop Sales & Expansion Analysis

Project Overview

This project analyzes coffee shop sales data using SQL to generate business insights, understand customer behavior, evaluate product performance, and recommend the best cities for future expansion.

Dataset Information

The dataset contains four tables: City Customers Products Sales These tables are connected through primary and foreign key relationships.

Business Questions Solved

1. Total Revenue Generated
2. Total Customers
3. Revenue by City
4. Customers by City
5. Top Selling Products
6. Revenue by Product
7. Average Sale Amount
8. Highest Spending Customers
9. Average Customer Spending by City
10. Best City for Expansion

Key Insights

- Identified top revenue-generating cities.
- Found the most popular coffee products.
- Analyzed customer spending behavior.
- Compared city-wise business performance.
- Evaluated expansion opportunities using SQL.

Final Recommendation

1. Pune

- Highest revenue generation
- Strong customer spending
- Good market potential

2. Chennai

- Strong revenue performance
- Consistent customer demand
- Balanced growth opportunity

3. Jaipur

- High customer count
- Strong growth potential
- Efficient business performance

Why Not Bangalore?

- Higher operating cost and rent burden
- Higher profitability risk

Why Not Delhi?

- Lower revenue efficiency compared to top cities
- Better opportunities available in other markets
